— THE MISSING RECEIPT

AI is doing *consequential* work. Nothing proves what happened.

Today's tools return an answer. They do not show which model ran, what data was touched, or whether the result was edited afterward. Four questions, no record.

*Which model
actually ran?*

— UNKNOWN

*Did the source
document leak?*

— UNKNOWN

*Was the answer
changed later?*

— UNKNOWN

*Can anyone else
verify any of it?*

— UNKNOWN

— CONTEXT

Agents are moving from chat to *action*.

Drafting prose is forgettable. Signing a release, paying a vendor, or filing a return is not. The work is consequential, so the record must be too.

— SHIFT

chat → **action**

A chat agent produces a draft. An *acting* agent operates on a system of record — payments, contracts, code, memory. The two surfaces require different rails.

— SURFACES THAT NOW REQUIRE A RECORD

documents

code

contracts

compliance

payments

agent memory

Each one demands the same record: *who acted, what was used, with which model, whether it can be re-verified.*

Answer, with a *receipt*.

Every important AI action emits a verifiable record — *skill, model, tier, evidence, chain anchor, payment*. The source stays private. The proof is portable.

→ 05

Run**Verify****Remember****Pay****Share**

User performs private AI work
in the workshop.

Every important action
produces a signed receipt.

Memory access is granted — or
revoked — per agent.

Verified skills are bought in OG;
receipt binds the payment.

Send a proof link without
exposing the private source.

PRIVATE AI WORK • PUBLIC PROOF

— THE WORKROOM

Studio — the *workroom*.

Open it, pick a skill, drop a file, pick a tier, run. Every module emits its own receipt.

— 01 · WORKROOM

Workroom

Run private document reviews, repo audits, OG integration checks. Quick, Standard, High-stakes, Audit tiers.

— 02 · CONSENSUS MODE

Consensus *Mode*

Analyst · Critic · Risk reviewer · Evidence checker · Judge.
Five reasoned passes for TIER 1 work.

— 03 · BURN MODE

Burn *Mode*

Source stays hidden; the action still produces proof. For inputs that must never leave the box.

— 04 · PROOF EXPLORER

Proof Explorer

The public receipt page at `r/<id>`. One canonical view, shareable by link.

— 05 · MEMORY CENTER

Memory *Center*

Grant and revoke agent memory by agent, skill, project, or session. Visible, reversible.

— 06 · AGENT PASSPORT

Agent Passport

An identity for each agent: trust score, receipt count, action history. ERC-7857 underneath.

07 • CLI & DEVELOPER SURFACE

07 / 12

— POWER-USER SURFACE

A different machine should be able to *verify*.

```

```

[!] Ivaronix

— WHAT THE CLI DOES

A receipt is true *off-platform*. Any operator can re-verify it without our web app running.

receipt verify Validate any receipt offline — schema, hash, signature, anchor, TEE, payment.

skills Publish, list, install marketplace skills.

memory Grant, revoke, and inspect memory permissions.

passport Agent identity, trust score, action history.

PRIVATE AI WORK • PUBLIC PROOF

A real receipt, *anchored* on OG mainnet.

PRIVATE AI WORK • PUBLIC PROOF to claim another primitive.

— THREE ROLES · THREE WALLETS

A marketplace with *proof of payment*.

— 01 · CREATOR

Publish a *verified* skill.

- 01 Register skill on-chain — metadata, tier, hash.
- 02 Set price in OG. Earn on every successful run.
- 03 Each invocation emits a receipt bound to you.

WALLET CREATOR.0X A1...

— 02 · BUYER

Pay, run, get a *receipt*.

- 01 Browse skills. Choose one. Inspect its passport.
- 02 Pay in OG. The receipt binds payment to result.
- 03 Share the proof. Keep the source private.

WALLET BUYER.0X C9...

— 03 · TREASURY

A protocol fee, *tracked* on-chain.

- 01 Small protocol fee split to treasury on every paid run.
- 02 Today: *90/10 split declared* on every paid-run receipt.
- 03 v1.1: live atomic OG settlement via *SkillRunPayment*.

WALLET TREASURY.0X F4...

• MAINNET, TODAY

90/10 creator/treasury split declared on every paid-run receipt — *v1.1: atomic OG settlement via SkillRunPayment*.

— NEXT 90 DAYS · & THE ASK

What ships, and what we *need*.

— ROADMAP

Cutover, gateway, batch.

- 01

Studio cutover — receipts · marketplace · explorer live for buyers on the public domain.

NOW
- 02

SkillRunPayment — atomic OG settlement; 90/10 split moves from declared to enforced.

V1.1
- 03

KV / memory gateway — production-grade public endpoint, replacing operator-hosted sidecar.

Q3
- 04

Consensus Mode v2 — signed reviewer roles for TIER 1 audit work.

Q3
- 05

Skill SDK + MCP server — receipts inside Claude Desktop, Cursor, bespoke agents. OG DA batching when volume earns it.

Q4

— THE ASK

Three things, plainly.

- 01

Ecosystem support from OG — introductions, co-marketing, integration depth.

HELP
- 02

Early users with sensitive AI work — compliance, legal, audit, security.

PILOTS
- 03

Skill creators who want their work paid for and provably bound to a receipt.

BUILD
- 04

Verifiers, auditors, regulators — the receipt is the asset; tell us what it should contain.
